Berlin, XX May 2021

Mr Hans Hoogervorst
Chairman of the
International Accounting Standards Board
Columbus Building
7 Westferry Circus / Canary Wharf
London E14 4HD

Dear Hans,

IASB Request for Information on the Post-implementation Review of IFRS 10 *Consolidated Financial Statements*, IFRS 11 *Joint Arrangements*, and IFRS 12 *Disclosure of Interests in Other Entities*

On behalf of the Accounting Standards Committee of Germany (ASCG) I am writing to comment on the Request for Information on the Post-implementation Review of IFRS 10 *Consolidated Financial Statements*, IFRS 11 *Joint Arrangements*, and IFRS 12 *Disclosure of Interests in Other Entities* (herein referred to as 'RfI'). We appreciate the opportunity to comment on the RfI.

@@@

Our responses to the complete set of questions raised in the invitation to comment are laid out in the appendix to this letter. If you would like to discuss our comments further, please do not hesitate to contact Ilka Canitz (canitz@drsc.de) or me.

Yours sincerely,

Sven Morich

Appendix – Answers to the questions in the RfI

Question 1 – Your background

To understand whether groups of stakeholders share similar views, the Board would like to know:

- (a) your principal role in relation to financial reporting. Are you a user or a preparer of financial statements, an auditor, a regulator, a standard-setter or an academic? Do you represent a professional accounting body? If you are a user of financial statements, what kind of user are you, for example, are you a buy-side analyst, sell-side analyst, credit rating analyst, creditor or lender, or asset or portfolio manager?
- (b) your principal jurisdiction and industry. For example, if you are a user of financial statements, which regions do you follow or invest in? Please state whether your responses to questions 2–10 are unrelated to your principal jurisdiction or industry

The Accounting Standards Committee of Germany (ASCG) is the national standard setter in the area of group financial reporting in Germany.

The views expressed in this comment letter are based on our experience with the application of IFRS 10, IFRS 11 and IFRS 12 in Germany and also reflect our consultation of German constituents on the IASB's Request for Information as part of the Post-implementation Review.

Overarching comments regarding the questions related to the definition of control – questions 2(a)-2(c) and 3(a)-3(b)

Overall, we believe that IFRS 10 provides a robust set of principles and requirements that enable an investor to determine whether it controls an investee. We acknowledge that in some situations, assessing whether an investor controls an investee can be challenging in practice and requires significant judgement. However, we believe that most of the implementation problems encountered in practice are due to the complexity of contractual arrangements and are not caused by fundamental deficiencies in the principles and requirements of IFRS 10. Therefore, we do not believe that comprehensive amendments to IFRS 10 regarding the definition of control are necessary.

Notwithstanding our general statement that we believe that the requirements on control in IFRS 10 are effectively applied in practice, we would like to highlight the following application issues, which we believe should be addressed by the IASB in the Post-implementation Review of IFRS 10. These issues relate to how the scope of IFRS 10 interacts with other IFRS standards ('*cross-cutting issues*') and relate to the following:

- accounting for put/call options on non-controlling interests (IFRS 10 and IAS 32),
- sale or contribution of a subsidiary (or a group of assets) between an investor and its associate or joint venture, and
- accounting from the perspective of an agent (IFRS 10 and IAS 28), i.e. how do the requirements on '*principals and agents*' in IFRS 10 interact with IAS 28 and should a

decision maker who has determined that it is an agent account for an investment as a financial instrument in accordance with IFRS 9 or as an investment in an associate accounted for using the equity method in accordance with IAS 28.

As explained in more detail below, we believe that these cross-cutting issues should be addressed by the IASB through standard setting. Please refer to our answers to question 3(a) and 10 below.

Question 2(a) – Power over an investee – Relevant activities

In your experience:

- (i) to what extent does applying paragraphs 10–14 and B11–B13 of IFRS 10 enable an investor to identify the relevant activities of an investee?
- (ii) to what extent does applying paragraphs B22–B24 of IFRS 10 enable an investor to determine if rights (including potential voting rights) are, or have ceased to be, substantive?

As explained above in our overarching comments to questions 2(a)-2(c) and 3(a)-3(b), we believe that IFRS 10 provides a robust set of principles and requirements that enable an entity to determine whether it controls an investee. Therefore, we do not believe that comprehensive amendments to IFRS 10 regarding the definition of control are necessary. Rather, we believe that the IASB should address issues related to how the scope of IFRS 10 interacts with other IFRS Standards (*'cross-cutting issues'*).

Question 2(b) – Power over an investee – Rights that give an investor power

In your experience:

- (i) to what extent does applying paragraphs B26–B33 of IFRS 10 enable an investor to determine if rights are protective rights?
- (ii) to what extent does applying paragraphs B22–B24 of IFRS 10 enable an investor to determine if rights (including potential voting rights) are, or have ceased to be, substantive?

As explained above in our overarching comments to questions 2(a)-2(c) and 3(a)-3(b), we believe that IFRS 10 provides a robust set of principles and requirements that enable an entity to determine whether it controls an investee. Therefore, we do not believe that comprehensive amendments to IFRS 10 regarding the definition of control are necessary. Rather, we believe that the IASB should address issues related to how the scope of IFRS 10 interacts with other IFRS Standards (*'cross-cutting issues'*).

Question 2(c) – Power over an investee – Control without a majority of the voting rights

In your experience:

- (i) to what extent does applying paragraphs B41–B46 of IFRS 10 to situations in which the other shareholdings are widely dispersed enable an investor that does not hold a majority of the voting rights to make an appropriate assessment of whether it has acquired (or lost) the practical ability to direct an investee’s relevant activities?
- (ii) how frequently does the situation in which an investor needs to make the assessment described in question 2(c)(i) arise?
- (iii) is the cost of obtaining the information required to make the assessment significant?

In our opinion and according to the feedback we have received from our constituency, situations occasionally arise in practice in which an investor with less than a majority of the voting rights has control of an investee, as it has the practical ability to direct the investee’s relevant activities because of the size of the investor’s voting rights relative to the size and dispersion of other shareholding. In the event that an entity needs to assess whether it controls an investee without a majority of the voting rights, the assessment often requires significant judgment and is subject to discussions.

As regards to the cost of obtaining the information required to make the assessment on a continuous basis, it should be noted that:

- in the case of a listed investee, the information (e.g. attendance at the annual general meeting and voting behaviour) can be easily obtained,
- in the case of an unlisted investee, obtaining the information necessary for the assessment and continuous monitoring is more complex, but manageable.

Therefore, we believe that the cost of obtaining the information required to make the assessment is not significant compared to other cost of preparing IFRS financial statements.

Given that cost of obtaining the information required to make the assessment is not significant, we believe that the existing requirements of IFRS 10 on control without a majority of voting rights do not need to be revised (and, in particular, they do not need to be simplified by introducing a minimum level of voting rights needed for control, as some stakeholders have requested).

Rather, we agree with the IASB’s statement that requirements based on quantitative thresholds should be avoided (ref. paragraph 19 in the Request for Information). Quantitative thresholds would, in our opinion, lead to an increase in entities’ leeway regarding the assessment of control. Instead, IFRS 10 should continue to provide principle-based requirements. As the IASB explains, the main objective in developing IFRS 10 was to develop a single basis for consolidation that requires a holistic and qualitative assessment of all legal, contractual and other facts and circumstances. Therefore, we do not agree with the request expressed by some stakeholders that quantitative thresholds (or a minimum level of voting rights needed for control) should be introduced.

Question 3(a) – The link between power and returns – Principals and agents

In your experience:

- (i) to what extent does applying the factors listed in paragraph B60 of IFRS 10 (and the application guidance in paragraphs B62–B72 of IFRS 10) enable an investor to determine whether a decision maker is a principal or an agent?
- (ii) are there situations in which it is challenging to identify an agency relationship? If yes, please describe the challenges that arise in these situations.
- (iii) how frequently do these situations arise?

Guidance on ‘Principals and Agents’ (paragraph B60, B62-B72 of IFRS 10)

We agree with the view expressed by some stakeholders that determining whether a decision maker is a principal or an agent can be challenging in practice and requires judgement.

On the one hand, this is often due to the complexity of the contractual arrangements in the relevant circumstances. On the other hand, we observe that specific issues can, in practice, often only be answered using non-authoritative ‘*second level guidance*’ (such as accounting literature). In this respect, we suggest the IASB develop more application guidelines regarding the requirements for determining whether a decision maker is a principal or an agent. This relates, for example, to the assessment of control over an investment funds which is actively managed by an asset manager.

However, as already explained in our answer to question 2(c), we do not agree with the request expressed by some stakeholders that quantitative thresholds (or a particular level of returns that would result in the determination of an agency relationship) should be defined. Instead, we agree with the IASB’s statement that requirements based on quantitative thresholds should be avoided (ref. paragraph 19 in the Request for Information).

Accounting for an investment held by an agent

Another issue that we would like to bring to the IASB’s attention concerns the accounting for an investment held by an agent. IFRS 10 and IAS 28 are silent on the accounting from the perspective of an agent, as to whether and under which circumstances:

- an investment held by an agent should be accounted for as a financial asset in accordance with IFRS 9, or
- though not controlling the investee (as the decision maker is acting as an agent), the agent might have significant influence over the investee and, thus, the investment should be accounted for using the equity method in accordance with IAS 28.

In our experience, this is a common issue for asset managers. However, it is not addressed by IFRS 10 nor by IAS 28. This issue was discussed by the IFRS Interpretations Committee (ref. *Fund manager’s assessment of significant influence*, IFRIC Update March 2017). However, the IFRS Interpretations Committee concluded that requirements relating to decision-

making authority held in the capacity of an agent could not be developed separately from a comprehensive review of the definition of significant influence in IAS 28, and therefore decided not to add this matter to its standard-setting agenda. Therefore, we recommend the IASB consider the accounting for an investment held by an agent as part of the Post-implementation Review of IFRS 10.

Question 3(b) – The link between power and returns – Non-contractual agency relationships

In your experience:

- (i) to what extent does applying paragraphs B73–B75 of IFRS 10 enable an investor to assess whether control exists because another party is acting as a de facto agent (ie in the absence of a contractual arrangement between the parties)?
- (ii) how frequently does the situation in which an investor needs to make the assessment described in question 3(b)(i) arise?
- (iii) please describe the situations that give rise to such a need.

As explained above in our overarching comments to questions 2(a)-2(c) and 3(a)-3(b), we believe that IFRS 10 provides a robust set of principles and requirements that enable an entity to determine whether it controls an investee. Therefore, we do not believe that comprehensive amendments to IFRS 10 regarding the definition of control are necessary. Rather, we believe that the IASB should address issues related to how the scope of IFRS 10 interacts with other IFRS Standards (*'cross-cutting issues'*).

Question 4(a) – Investment entities – Criteria for identifying an investment entity

In your experience:

- (i) to what extent does applying the definition (paragraph 27 of IFRS 10) and the description of the typical characteristics of an investment entity (paragraph 28 of IFRS 10) lead to consistent outcomes? If you have found that inconsistent outcomes arise, please describe these outcomes and explain the situations in which they arise.
- (ii) to what extent does the definition and the description of typical characteristics result in classification outcomes that, in your view, fail to represent the nature of the entity in a relevant or faithful manner? For example, do the definition and the description of typical characteristics include entities in (or exclude entities from) the category of investment entities that in your view should be excluded (or included)? Please provide the reasons for your answer.

In our experience, and according to the feedback we have received from our constituents, applying the requirements on the definition and the description of the typical characteristics of

an investment entity do not cause significant application issues in practice. By contrast, questions on how the requirements on the consolidation exception interact with multi-level group structures are highly relevant in practice. Please refer to our answer to questions 4(b) below.

Question 4(b) – Investment entities – Subsidiaries that are investment entities

In your experience:

- (i) are there situations in which requiring an investment entity to measure at fair value its investment in a subsidiary that is an investment entity itself results in a loss of information? If so, please provide details of the useful information that is missing and explain why you think that information is useful.
- (ii) are there criteria, other than those in paragraph 32 of IFRS 10, that may be relevant to the scope of application of the consolidation exception for investment entities?

Investment entity parent of an investment entity subsidiary

In our experience, and according to the feedback we have received from our constituents, group structures in which an investment entity parent holds an interest in a subsidiary that is an investment entity itself are not common in our jurisdiction.

By contrast, group structures in which a non-investment entity parent holds an interest in a subsidiary that is an investment entity are common in the banking, insurance, and private equity sector. However, the exception to consolidation available to an investment entity does not apply to its non-investment entity parent (ref. paragraph 33 of IFRS 10). As explained in more detail below, we therefore recommend the IASB revisit its previous decision on the requirements for a non-investment entity parent of an investment entity subsidiary as part of the Post-implementation Review of IFRS 10.

Non-investment entity parent of an investment entity subsidiary (paragraph 33 of IFRS 10)

As previously noted in our comment letters on the IASB's Exposure Draft ED/2011/4 *Investment Entities* and ED/2014/2 *Investment Entities: Applying the Consolidation Exception*, we reiterate our belief that retaining the investment entity's accounting would result in a more decision-useful accounting treatment on the parent entity level and regardless of whether or not the parent entity was an investment entity. Retaining the investment entity's accounting provides more decision-useful information on the parent entity's level, because the characteristics of the (controlled) investment remain the same.

As noted by the IASB in paragraph BC249 of IFRS 10, the fair value measurement applied by an investment entity to its interests in subsidiaries provides the most relevant information to users of the financial statements, as this appropriately depicts the investment purpose and the performance of the investment. We believe the IASB's reasoning to be equally valid for the group financial statements of a non-investment entity parent of an investment entity. This is particularly relevant for conglomerates that operate an '*investment activity*' as a separate business activity through an investment entity subsidiary (e.g. as an operating segment) and is a

common issue in the banking, insurance, and private equity sector. Investments held by an investment entity subsidiary are managed internally like investments of an investment entity, both at the parent entity level, and the investment entity subsidiary level. In these cases, the business model of the (non-investment) entity parent does not differ from the business model of an investment entity as regards the investment held by its investment entity subsidiary, as the investments are managed on a fair value basis, by both, the parent entity, and the investment entity subsidiary. However, under current IFRS 10, the non-investment entity parent needs to unwind the specialised accounting at the investment entity subsidiary, i.e. for the same investment two different sets of financial statements need to be prepared and maintained at the parent and subsidiary level, resulting in burdensome costs of consolidating the investment that is not consolidated on the investment entity-subsidiary level.

Therefore, we recommend the IASB revisit as part of the Post-implementation Review its previous decision requiring a parent of an investment entity to consolidate all entities that in controls, including those controlled through an investment entity subsidiary, unless the parent itself is an investment entity.

Question 5(a) – Accounting requirements – Change in the relationship between an investor and an investee

In your experience:

- (i) how frequently do transactions, events or circumstances arise that:
 - (a) alter the relationship between an investor and an investee (for example, a change from being a parent to being a joint operator); and
 - (b) are not addressed in IFRS Standards?
- (ii) how do entities account for these transactions, events or circumstances that alter the relationship between an investor and an investee?
- (iii) in transactions, events or circumstances that result in a loss of control, does re-measuring the retained interest at fair value provide relevant information? If not, please explain why not, and describe the relevant transactions, events or circumstances.

Changes in the relationship between an investor and an investee

We suggest the IASB when reviewing the requirements on changes in the relationship between an investor and an investee that these issues should not be considered in isolation, i.e. with a focus on changes in the type of consolidation according to IFRS 10, IFRS 11, and IAS 28. Rather, we suggest the IASB consider also whether any ‘cross-cutting issues’ regarding the interaction with other IFRS Standards arise. In particular, it should be assessed whether any other contractual relationships that exist between the parties (e.g. customer-supplier-relationships, and leases) are affected and whether changes in the relationship between an investor and an investee affect the accounting for these relationships in accordance with other IFRS Standards (e.g. IFRS 15 and IFRS 16).

Initial measurement of a retained interest after loss of control (paragraph B98 of IFRS 10)

We render a critical view on the requirement paragraph B98 of IFRS 10 that an entity shall remeasure any interest retained at its fair value at the date control is lost. When a parent loses control of a subsidiary and retains an investment that is accounted for using the equity method (in accordance with IAS 28 *Investment in Associates and Joint Ventures*), remeasuring the interest retained at its fair value may result in goodwill included in the carrying amount of the investment. Therefore, we question whether measuring a retained interest at the investors share of the carrying amount of the investee's net assets is more appropriate in these circumstances, as no significant changes have occurred to the retained interest.

Question 5(b) – Accounting requirements – Partial acquisition of a subsidiary that does not constitute a business

In your experience:

- (i) how do entities account for transactions in which an investor acquires control of a subsidiary that does not constitute a business, as defined in IFRS 3? Does the investor recognise a non-controlling interest for equity not attributable to the parent?
- (ii) how frequently do these transactions occur?

Partial acquisition of a subsidiary that does not constitute a business

In our experience, transactions described in question 5(b) occur frequently in practice (e.g., in the pharmaceutical industry). Therefore, we believe that accounting for a partial acquisition of a subsidiary that does not constitute a business (as defined by IFRS 3) should be addressed by the IASB. In our opinion, in the fact pattern described by the IASB in question 5(b), the existence of a legal vehicle should not affect the accounting for the transaction, i.e., the investor should not recognise a non-controlling interest.

In this context, it should be noted that not only the question arises as to whether the acquirer should (or should not) recognise a non-controlling interest for the equity not attributable to the parent. Moreover, similar questions also arise with regard to the accounting for:

- contingent considerations, and
- derivatives over non-controlling interests.

Depending on whether the acquisition method according to IFRS 3 is applied, a different presentation of the transaction in the financial statements is achieved.

For example, if an acquirer applies IFRS 3 to a partial acquisition of a subsidiary that does not constitute a business, the consideration transferred includes any contingent consideration arrangements, and is recognised and measured at fair value at the acquisition date (IFRS 3.37). By contrast, contingencies incurred in an asset acquisition are recognised only if they meet the recognition criteria in IAS 37. As such, a provision is recognised only if it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation. If

this condition is not met, no provision shall be recognised (IAS 37.14). As a result, contingent consideration in the form of milestone payments cannot be recognised until the milestone is reached, since the consideration is contingent upon future events that are beyond an entity's control.

Another issue to be considered in connection with the partial acquisition of a subsidiary that does not constitute a business, relates to the accounting for derivatives over non-controlling interests. In general, a contract that contains an obligation for an entity to purchase its own equity instruments for cash or another financial asset gives rise to a financial liability (IAS 32.23). Consequently, if an acquirer applies IFRS 3 to a partial acquisition of a subsidiary that does not constitute a business, any contracts obliging the acquirer to buy additional shares might give rise to a financial liability (IAS 32.23). By contrast, if an entity concludes that it should not recognize non-controlling interest, a financial liability will not be recognised until the equity instruments are acquired, since the transaction is contingent upon future events.

For further details on the overarching issue, whether the existence of a legal vehicle should affect the accounting for a transaction, please refer to our comments below.

A broader consideration is needed within the PiR regarding of whether the existence of a legal vehicle should (or should not) affect the accounting for a transaction

We agree with the IASB that the issue described in question 5(b) can be linked to a more general discussion on whether the existence of a legal vehicle ('*corporate wrapper*') should affect the accounting for a transaction (ref. IASB Meeting April 2020, Agenda ref 7A, paragraphs 69-70). Therefore, we believe that the IASB should address the broader matter of whether the legal form of a transaction (e.g. the sale of an equity interest in a single-asset entity rather than a direct sale of the asset within that entity) results in any difference in accounting for the transaction.

As explained in our [comment letter to the IFRS Interpretations Committee's tentative agenda decision in its September 2020 meeting](#), we believe that a transaction that could have been facilitated standalone or through an empty shell should lead to the same accounting, as its economic substance does not differ. In the course of these broader considerations, we also propose the IASB revisit the issues discussed by the IFRS Interpretations Committee:

- '*Sale and Leaseback of an Asset in a Single Asset Entity*', tentative agenda decision taken by the IFRS Interpretations Committee published in the September 2020 IFRIC Update, and
- '*Sale of a subsidiary to a customer*', or formerly '*Sale of a single asset entity containing real estate*', discussed by the IFRS Interpretations Committee in its June 2019 meeting.

Question 6 – Collaborative arrangements outside the scope of IFRS 11

In your experience:

- (a) how widespread are collaborative arrangements that do not meet the IFRS 11 definition of 'joint arrangement' because the parties to the arrangement do not have joint control? Please provide a description of the features of these collaborative arrangements, including whether they are structured through a separate legal vehicle.
- (b) how do entities that apply IFRS Standards account for such collaborative arrangements? Is the accounting a faithful representation of the arrangement and why?

In our experience, collaborative arrangements outside the scope of IFRS 11 as addressed by the IASB in question 5(b), encounter frequently in practice (e.g., in the pharmaceutical, chemical and biotech industry). Accounting issues that arise in this context relate in particular to revenue recognition according to IFRS 15 *Revenue Recognition*. However, typically, one of the parties that participates in a collaborative arrangement acts as a principal (as described by IFRS 15). Therefore, in our view, applying the requirements on '*principal versus agent considerations*' (in paragraphs B34-B38 of IFRS 15) provide sufficient guidance for the accounting issues relevant in the context of such collaborative arrangements.

Overall, we observe that, in practice, solutions have been developed for accounting issues that arise as regards of collaborative arrangements outside the scope of IFRS 11. Therefore, we believe that no significant application issues persist that would need to be addressed by the IASB through standard setting.

Question 7 – Classifying joint arrangements

In your experience:

- (a) how frequently does a party to a joint arrangement need to consider other facts and circumstances to determine the classification of the joint arrangement after having considered the legal form and the contractual arrangement?
- (b) to what extent does applying paragraphs B29–B32 of IFRS 11 enable an investor to determine the classification of a joint arrangement based on 'other facts and circumstances'? Are there other factors that may be relevant to the classification that are not included in paragraphs B29–B32 of IFRS 11?

In our opinion, classifying joint arrangements can be challenging in practice and is subject to significant judgement. This observation is also supported by the number of requests submitted to the IFRS Interpretations Committee about the classification of joint arrangements.

Regarding classification of joint arrangements within our jurisdiction, we observed that classifying some legal forms (specific to German company law) proved challenging when classifying joint arrangements upon initial application of IFRS 11. However, in practice, solutions have

been developed for these issues within our jurisdiction. Therefore, we believe that no significant application issues persist that would need to be addressed by the IASB through standard setting.

However, we agree with the IASB's observation that, in practice, entities often need to consider '*other facts and circumstances*' (applying paragraphs B29-B32 of IFRS 11) to assess whether a joint arrangement is a joint operation or a joint venture after having considered the legal form and the contractual arrangement. Furthermore, the effects of a different classification are significant due to the differences in the accounting presentation depending on the classification made. Therefore, we understand the request by some stakeholders that the requirements in IFRS 11 regarding the classification of joint arrangements should be simpler to apply.

In light of this call for simplifying the requirements in IFRS 11, we have discussed one possible approach that we suggest the IASB to consider. One possible approach to simplify the assessment of whether a joint arrangement is a joint operation or a joint venture may consist in to:

1. classify joint arrangements that are structured through a separate vehicle (whose legal form causes the separate vehicle to be considered in its own right) as joint ventures by convention; and
2. define (specific) exceptions to this classification convention (for example for those joint arrangements that are primarily designed for the provision of output to the parties (as stipulated by paragraph B31 of IFRS 11)).

Such an approach may simplify the assessment whether a joint arrangement is a joint operation, or a joint venture, because it is not necessary to consider all of the (three) steps in paragraph B15 of IFRS 11 in each case.

Question 8 – Accounting requirements for joint operations

In your experience:

- (a) to what extent does applying the requirements in IFRS 11 enable a joint operator to report its assets, liabilities, revenue and expenses in a relevant and faithful manner?
- (b) are there situations in which a joint operator cannot so report? If so, please describe these situations and explain why the report fails to constitute a relevant and faithful representation of the joint operator's assets, liabilities, revenue and expenses.

We note that the issues addressed by the IASB in question 8 were subject to several agenda decisions published by the IFRS Interpretations Committee, for example:

- Accounting by the joint operator: the accounting treatment when the joint operator's share of output purchased differs from its share of ownership interest in the joint operation (March 2015),
- Accounting by the joint operator: recognition of revenue by a joint operator (March 2015),
- Sale of Output by a Joint Operator (March 2019), and
- Liabilities in relation to a Joint Operator's Interest in a Joint Operation (March 2019).

Given that the role and the status of agenda decisions published by the Interpretations Committee has recently been clarified by the Amendments to the *Due Process Handbook* (as published in August 2020), we recommend the IASB revisit the agenda decisions published by the IFRS Interpretations Committee regarding IFRS 10, IFRS 11 and IFRS 12 and redeliberate whether they contain additional application guidance that should be included into the IFRS Standards on consolidation. This would also be in line with the previous practice of the IASB to incorporate the agenda decisions of the Interpretations Committee into IFRS Standards at the next occasion through standard setting.

Further, we note that the above-mentioned agenda decisions published by the Interpretations Committee predominantly deal with questions of the interaction of the scope of IFRS 11 with other IFRS Standards (namely IFRS 15 *Revenue Recognition* and IFRS 16 *Leases*). Therefore, we question whether the issues raised in question 8 should be addressed by a more general discussion regarding the interaction of IFRS 11 with other IFRS Standards, i.e. whether (or not) the accounting requirements for joint operations in IFRS 11 take precedence over the accounting requirements in other IFRS Standards (e.g. IFRS 15 and IFRS 16). As also explained in our answer to question 5(b) above, we therefore recommend the IASB undertake a broader consideration of how IFRS 10 and IFRS 11 interact with the scope of other IFRS Standards.

Question 9 – Disclosure of interests in other entities

In your experience:

- (a) to what extent do the IFRS 12 disclosure requirements assist an entity to meet the objective of IFRS 12, especially the new requirements introduced by IFRS 12 (for example the requirements for summarised information for each material joint venture or associate)?
- (b) do the IFRS 12 disclosure requirements help an entity determine the level of detail necessary to satisfy the objective of IFRS 12 so that useful information is not obscured by either the inclusion of a large amount of detail or the aggregation of items that have different characteristics?
- (c) what additional information that is not required by IFRS 12, if any, would be useful to meet the objective of IFRS 12? If there is such information, why and how would it be used? Please provide suggestions on how such information could be disclosed.
- (d) does IFRS 12 require information to be provided that is not useful to meet the objective of IFRS 12? If yes, please specify the information that you consider unnecessary, why it is unnecessary and what requirements in IFRS 12 give rise to the provision of this information.

Regarding the current disclosure requirements according to IFRS 12 (as well as the request expressed by some stakeholders for additional disclosures), we have received feedback from preparers from our constituency that:

- current disclosure requirements according to IFRS 12 are already very extensive,

- there is no evidence from capital market communications with investors that ‘*too little*’ information is disclosed on interests in other entities,
- in practice, the assessment of whether information on interest in other entities is material for users of financial statements is challenging, possibly contributing to the disclosure problem (as described by the IASB in its former Discussion Paper *Disclosure Initiative – Principles of Disclosures*), and
- it is questionable whether the information required to be disclosed in accordance with IFRS 12 provides users of financial statements with relevant information they need to forecast an entity’s future cash flows.

We therefore recommend that the IASB further investigate the cost-benefit profile of its requirements to disclose information on interests in other entities. In particular, it should be taken into account that information to be disclosed is not costless for investors, as costs for the preparation of financial statements are implicitly to be borne by investors. This means that when developing new disclosure requirements, the IASB should not weigh the demand expressed by investors for additional disclosures with the costs incurred by preparers; rather, investors themselves should be forced to weigh their information needs from the perspective of bearing the costs of preparing the disclosures. Since the amount of information to be disclosed in the notes to the financial statements is limited, investors would thus also have to decide which information should not be disclosed (anymore) in return for a new disclosure requirement. We believe that such an approach will help the IASB in assessing which information entities should be required to disclose, as it balances the information needs of users and the costs for the preparing the information. Furthermore, this is also supported by findings from academic research.

Question 10 – Other topics

Are there topics not addressed in this Request for Information, including those arising from the interaction of IFRS 10 and IFRS 11 and other IFRS Standards, that you consider to be relevant to this Post-implementation Review? If so, please explain the topic and why you think it should be addressed in the Post-implementation Review.

Cross-cutting issues

We believe that the following application issues which are related to the question of how the scope of IFRS 10 interacts with other IFRS standards ("cross-cutting issues") should be addressed by the IASB:

- accounting for put/call options on non-controlling interests (IFRS 10 and IAS 32), and
- sale or contribution of a subsidiary (or a group of assets) between an investor and its associate or joint venture (IFRS 10 and IAS 28).

As regards to the accounting for put/call options non-controlling interests there is a lack of explicit guidance in IFRS Standards and potential contradictions between the requirements of IFRS 10 and IAS 32, resulting in diversity in practice. Accounting issues that arise in this context are:

- whether or not a non-controlling interest should be recognised (including the question whether IAS 32 takes precedence over IFRS 10), and
- whether or not a financial liability for a put option written on non-controlling interest should be recognised and how that financial liability should be measured subsequently.

As put/call options are common in practice, we believe that these issues should be addressed by the IASB either as part of the Post-implementation Review of IFRS 10, or in its *Financial Instruments with Characteristics of Equity* project which recently has been moved from the research programme to the standard-setting programme.

Furthermore, we recommend the IASB resume work on its former project '*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*'. In September 2014, the IASB issued narrow-scope amendments to IFRS 10 *Consolidated Financial Statements* and IAS 28 *Investments in Associates and Joint Ventures* (2011) to remove an inconsistency between the requirements in IFRS 10 and those in IAS 28 (2011) that relate to the sale or contribution of assets between an investor and its associate or joint venture. In December 2015, the IASB postponed the effective date of these amendments indefinitely pending the completion of its research project on the equity method of accounting. Consequently, and in particular since these amendments were not endorsed by the European Union, entities within the European Union, in practice, need to adopt their own accounting policy choice resulting in diversity in practice. As transactions including the contribution of assets to an associate or a joint venture are common in practice, we recommend the IASB resuming work on this project as part of the Post-implementation Review of IFRS 10.

In addition – as already explained in more detail in our answer to question 5(b) – we believe that a broader consideration is needed within the Post-implementation Review regarding of whether the existence of a legal vehicle should affect the accounting for a transaction. These issues also are related to the question of how the scope of IFRS 10 and IFRS 11 interact with the scope of other IFRS Standards (for instance IFRS 15 and IFRS 16).

Other topics - Bail-out acquisition of a non-performing borrower

As another topic, we suggest the IASB consider so-called '*bail-out acquisitions of non-performing borrowers*' within the Post-implementation Review. This topic refers to situations in which a bank – in its capacity as a lender – obtains control over a borrower because the borrower has become non-performing, and, as a consequence, the bank must consolidate the borrower in its consolidated financial statements in accordance with IFRS 10.

However, consolidation non-performing borrowers leads to confusion in capital market communication, as it needs to be explained that the provision for credit losses is not only included in the line item '*loss allowances*' in the statement of profit or loss, but in the case of bail-out acquisitions is also reflected in '*other operating income*' (e.g. impairment expenses on assets acquired in the course of bail-out acquisitions). Therefore, we suggest the IASB consider whether a different accounting treatment for bail-out acquisitions would lead to a more appropriate presentation. In particular, we suggest the IASB consider introducing a consolidation exemption for bail-out acquisitions of non-performing borrowers similar to the '*exception to consolidation for investment entities*'.

One of the main reasons for introducing the consolidation exception for investment entities was that *'an investment entity holds investments for the sole purpose of capital appreciation, investment income (such as dividends or interest), or both. Users of the financial statements of these investment entities told the Board that the fair value of the investments and an understanding of how the investment entity measures the fair value of its investments is the most useful information.'* (ref. paragraph BC217 of IFRS 10). With respect to bail-out acquisitions of non-performing borrowers it could be argued that an entity's activities and business purpose also differ significantly when compared to its investment in operating subsidiaries. The activity and business purpose of an entity in relation to non-performing borrowers primarily involves the liquidation of the acquired assets that were previously pledged as securities.

The notion of 'control' across IFRS Standards

We note that IFRS 10 introduced a *'concept of control'* which differs in meaning from other concepts of control, such as, for example, introduced in paragraph 31 of IFRS 15, according to which revenue is recognized when control over a good or a service is transferred to the customer.

Although we are aware of that the concept of control – as used in IFRS 10 and IFRS 11 – cannot be applied to other IFRS Standards (e.g. IFRS 15), we suggest the IASB clarify that the notion of control – as defined by paragraph 5-18 in IFRS 10 – shall only be applied to matters of assessing whether an investor controls an investee (or whether two or more investors jointly control an investee). However, in the long run, the IASB might want to consider aligning the notion(s) of 'control' across IFRS Standards.
